FREE PYTHON COURSE

Python in 10 Days

Complete Roadmap

10 days from zero to writing real Python programs

Python & GenAI Developer | Claude Certified Architect

Lakshmi Prasad Gondinigari

Inside this document

1. Course at a glance
2. What you will learn
3. Day-by-day plan
4. How the classes run
5. What to do after Python

Course at a glance

Item	Details
Course	Python in 10 Days: complete beginner to confident programmer
Duration	10 days, one topic per day
Level	Beginner friendly. No programming experience needed
Cost	Free
You need	A laptop or PC with internet, Python 3 and VS Code (or just a browser with Google Colab)
Material	One PDF per day (slides + code + practice) and this roadmap
Teaching style	Concept, then live code, then practice questions

What you will be able to do

- Read and write Python programs with confidence
- Use variables, conditions, loops, functions and data structures properly
- Work with files, JSON and CSV, and handle errors without crashing
- Model problems using classes and objects (OOP)
- Analyse a small dataset with NumPy and Pandas
- Build and publish a complete mini project on GitHub
- Be ready for the SQL, Machine Learning, Deep Learning and GenAI courses

10-day roadmap

Day	Topic	What is included
1	Introduction & Getting Started	Introduction class, setup, first program, variables, data types, input / output
2	Operators & Strings	Arithmetic and logical operators, strings, slicing, methods, f-strings
3	Control Flow: Conditions & Loops	if / elif / else, while, for, range, break / continue, classic patterns
4	Lists & Tuples	Lists, list methods, comprehension, nested lists, tuples
5	Dictionaries & Sets	Dictionaries, sets, counting and grouping, choosing a structure
6	Functions	Functions, arguments, *args / **kwargs, scope, lambda, recursion
7	Modules, Files & Exceptions	Modules, pip, files, JSON, CSV, exception handling
8	Object Oriented Programming	Classes, objects, inheritance, polymorphism, encapsulation
9	NumPy & Pandas for Data	NumPy arrays, Pandas DataFrames, cleaning, grouping, charts
10	Mini Project & What Next	Mini project, clean code, Git / GitHub, interview questions, next steps

Introduction class: what happens on Day 1

- Welcome, course structure and how to ask doubts
- What Python is and why it is the number one language for data and AI
- Live setup help: Python, VS Code or Google Colab
- Write and run your first program together
- Learn variables, data types and input / output
- Practice set and homework for the next class
  - Nobody is left behind: if setup fails, we fix it on the spot

How each day runs

Part	Suggested time	What happens
Recap	10 min	Quick revision and homework doubts
Concept	40 min	New topic explained with slides
Live coding	30 min	Type the examples together and break them on purpose
Practice	30 min	Solve the day's practice set
Q and A	10 min	Doubts and a preview of the next day

> Suggested plan only: the final batch timing will be shared on WhatsApp and email after registration.

Tools checklist

- Python 3.9 or newer from python.org (tick Add to PATH on Windows)
- Visual Studio Code with the Python extension (or Google Colab in a browser)
- A folder called python-course where you save every day's code
- A free GitHub account to upload your practice and the final project
- A notebook for your own short notes and doubts

How to get the most out of the course

- Type every example yourself; do not only read or copy
- Practice daily for 30 to 45 minutes, even on busy days
- When you get an error, read the last line first. It tells you what went wrong
- Change the example, break it, fix it. That is how you learn
- Finish the practice set before the next class
- Ask doubts early: every question helps the whole group

After Python: your learning path

Step	Course	Outcome
1	Python (this course)	Programming fundamentals
2	SQL	Query and analyse data in databases
3	Machine Learning	Build prediction and classification models
4	Deep Learning	Neural networks, vision and language models
5	Artificial Intelligence and Generative AI	LLMs, prompt engineering, RAG, agents
